1 Introduction

MdSymbol is a font of mathematical symbols designed as a companion to Adobe Myriad Pro, but it might also fit well to other contemporary typefaces. To use this font in a LaTEX

document, add the command

\usepackage[\(\langle options \rangle \] \{ mdsymbol \}

to the preamble of your document. With default settings, it redefines most of the standard mathematical symbols and makes available many new ones (see Section 5). With the onlysansmath option, the symbols are only defined for two new math versions, sans and sansbold. This allows to easily use two distinct math fonts in one document. For details and the other available options see section 3.1.

Acknowledgements

The MdSymbol font is heavily based on FdSymbol¹, another math symbol font, designed by Michael Ummels. All supporting scripts (to e.g. convert the MetaFont sources to Type 1 fonts) were written by him. I got a lot of help in comp.text.tex so basically the main code implementing the onlysansmath functionality is written by Bruno Le Floch, Enrico Gregorio, Lars Madsen and Heiko Oberdiek; the ugly parts and bugs by me.

2 Interferences with other packages

The mdsymbol package is incompatible with the amssymb and amsfonts packages. It automatically loads the amsmath and textcomp packages. If you want to pass options to these packages, you can either load these packages before mdsymbol or you can include the options in the \documentclass command.

3 Options

3.1 Font selection

MdSymbol comes in four weights, which are (in increasing order) Light, Regular, Semibold and Bold. Of these, Light and Regular are suitable for normal math typesetting, while Semibold and Bold can be used for bold math typesetting. Using the options normalweight and boldweight, you can select which weights are used. For example, to use the Light weight as the normal weight in math, add normalweight=Light to the package options. Analogously, to use the Bold weight with \boldmath or \boldsymbol, add boldweight=Bold to the package options. By default, Regular and Semibold are used. Additionally, it is possible to use a suitable weight automatically depending on the font size. By selecting autolight or autoregular for normalweight, Light or Regular weight, respectively, is used for font sizes larger than

http://www.ctan.org/pkg/fdsymbol/

6pt and Regular or Semibold, respectively, for smaller sizes. Similarly, autosemibold for boldweight selects Semibold for bold symbols larger than 6pt and Bold below 6pt.

3.2 Math Symbols only in sans serif math

With the **onlysansmath** option, mdsymbol does not change already defined math symbols but declares two new math versions, sans and sansbold, and defines its symbols to be only used within these math versions. Use the command \mathversion{sans} or \mathversion{sansbold} to switch to this math version. Also single input character symbols (e.g. +, -, (,)) adapt to the math version except when used with a delimiter size increasing command like \big(.² As a workaround, use the corresponding full command instead (\big\lparen).

3.3 Miscellaneous

mdsymbol uses and combines some symbols of the text font (section 5.7). The option **retainmissing** prevents this.

In order to use MdSymbol with different text fonts, it is possible to scale the fonts by an arbitrary factor. This can be achieved with the option **scale**. For example, to use the fonts at 90 % of their original size, you can add scale=0.9 to the package options. Finally, it is possible to increase the height of delimiters slightly (by 20 % in text size and by 25 % in \big size). This can be achieved by activating the option **largedelims**. Use this option if you want to combine MdSymbol with a text font that has rather tall delimiters.

The following table summarises all options (keys) that can be used with the mdsymbol package. Values that correspond to the default behaviour of the package are marked by an asterisk.

Key	Values
normalweight	Light, Regular*, autolight, autoregular
boldweight	Semibold*, Bold, autosemibold
onlysansmath	true, false*
retainmissing	true, false*
scale	⟨factor⟩
largedelims	true, false*

²Any help to solve this problem is highly welcome!

4 Version history

Version o.1: First version

 $Version \, o. 1a: Always \, declare \, sansmath tabular \, and \, sansmath bold tabular \, if \, \verb"onlysansmath" \, the properties of the proper$

option is given

Version o.2: Internal bugfixes

Version o.2a:

· Bugfixes of bugfixes

 Issue error when using a symbol in non-sans math versions which has not been declared before loading mdsymbol with onlysansmath option

Version o.3: Rename package to lower-case mdsymbol for CTAN upload

Version o.4:

· Added overlining command

• Tuning of parameters and correction of some symbols

Version o.5: Added symbols \prodi and \coprodi

5 Symbols

The mdsymbol package provides the following symbols.

5.6 Delimiters and accents
          (, \lparen
                                               [,\lbrack
          ), \rparen
                                              ], \rbrack
```

In addition to the \overline command, which produces a line with a height of three times the line width over its argument (and which might be to high due to that), mdsymbol also defines an command with a fixed height:

xxx \overlining

5.7 Faked symbols

The following symbols are taken from the text font.

†	\dagger	ħ	\hbar
‡	\ddagger	ħ	\hslash
\P	\mathparagraph	(R)	\circledR
§	\mathsection	_	
\$	\mathdollar	(S)	\circledS
£	mathsterling	λ	\lambdabar
¥	\yen	λ	\lambdaslash

5.8 Missing symbols

The following symbols from Computer Modern or the AMS fonts are missing in MdSymbol. If available, they should be taken from the text font.

\mho	\backepsilon	\diagup
\eth	$\mbox{\tt mapstochar}$	\diagdown
\digamma	$\$ hook	\Bbbk
\varkappa	\rhook	

6 Implementation

```
1 (*style)
2 \RequirePackage{xkeyval}
3 \newcommand*\mdsy@choicekey[3]{%
4 \define@choicekey*{mdsymbol.sty}{#1}[\@tempa\@tempb]{#2}{#3}%
5 }
```

We use xkeyval's key mechanism to declare all options. The first options determines the size of delimiters.

```
6 \define@boolkey{mdsymbol.sty}[mdsy@]{largedelims}[true]{}
```

The following option determines whether faked symbols should be defined.

```
7 \define@boolkey{mdsymbol.sty}[mdsy@]{retainmissing}[true]{}
```

The next option allows to scale the fonts by an arbitrary factor.

```
8 \newcommand{\mdsy@scale}{1.0}
```

```
9 \define@key{mdsymbol.sty}{scale}{\renewcommand\mdsy@scale{#1}}
```

The next option controls whether only the sans and sansbold mathversions are modified.

```
10 \define@boolkey{mdsymbol.sty}[mdsy@]{onlysansmath}[true]{}
```

The following two options control which weights are used for which math version and font size.

```
11 \newcommand\mdsy@mweight@normal{Regular}
12 \newcommand\mdsy@mweight@small{Regular}
13 \newcommand\mdsy@bweight@normal{Semibold}
14 \newcommand\mdsy@bweight@small{Semibold}

In the n-th root, we don't want the n to come too close to the radical (adopted from package lucimatx).

Mathchars. If onlysansmath, we make certain single characters active to react on the mathversion.

amsmath and amsopn define commands which use the mathcode of some of the symbols above to define new math characters. Since the mathcode is out of the range (made active), this fails. So change the commands and make the definitions at the begin of the document.

2159
2160 }
There is no \not symbol in MdSymbol since all relational symbols come with a stroked
companion. For compatibility we define a \not command that places a virgule over
the following symbol.
2161 \mdsy@DeclareRobustCommandArg{c@ncel}{2}{\m@th\ooalign{$\hfil#1/\hfil$\crcr$#1#2$}}
2162 \mdsy@DeclareRobustCommandArg{not}{1}{\mathrel{\m0th\mathpalette\c@ncel{#1}}}
The height of the \overline command is three times the default_line_thickness
which can be too much for heavier weights. An alternative implementation follows with a
fixed height. It is based on http://tex.stackexchange.com/a/24134/11605
and http://tex.stackexchange.com/a/43906/11605.
