1 Introduction

FdSymbol is a font of mathematical symbols designed as a companion to Typotheque's Fedra family $^{\rm l}$, but it might also fit well to other contemporary type-faces. To use this font in a ${\tt LAT}_{\rm EX}$ document, add the command

\usepackage[\langle options \rangle] \{ fdsymbol \}

to the preamble of your document. This redefines most of the standard mathematical symbols and makes available many new ones (see Section 4). For the available options see Section 3.

 $^{^{1} \}verb|http://www.typotheque.com/fonts|$

Acknowledgements

The FdSymbol font is derived from MnSymbol², another math symbol font, designed by Achim Blumensath.

2 Interferences with other packages

The fdsymbol package is incompatible with the amssymb and amsfonts packages. It automatically loads the amsmath and textcomp packages. If you want to pass options to these packages, you can either load these packages before fdsymbol or you can include the options in the \documentclass command.

3 Font selection

FdSymbol comes in four weights, which are (in increasing order) Book, Regular, Medium and Bold. Of these, Book and Regular are suitable for normal math type-setting, while Medium and Bold can be used for bold math typesetting. Using the options normalweight and boldweight, you can select which weights are used. For example, to use the Medium weight as the normal weight in math, add normalweight=Medium to the package options. Analogously, to use the Bold weight with \boldmath or \boldsymbol, add boldweight=Bold to the package options. By default, Book and Medium are used. Additionally, it is possible to select a suitable weight automatically depending on the font size by selecting auto. For example, if you use the option normalweight=auto, the Book weight will be used for normal and large sizes, but the Regular weight will be used for small sizes (e.g. in sub- and superscripts).

In order to use FdSymbol with different text fonts, it is possible to scale the fonts by an arbitrary factor. This can be achieved with the option scale. For example, to use the fonts at 90% of their original size, you can add scale=0.9 to the package options. Finally, it is possible to increase the height of delimiters slightly (by 20% in text size and by 25% in \big size). This can be achieved by activating the option largedelims. Use this option if you want to combine FdSymbol with a text font that has rather tall delimiters, such as Fedra Serif B. In fact, the height of normal delimiters will match the height of text delimiters in Fedra Serif B if you select this option.

The following table summarises all options (keys) that can be used with the fdsymbol package. Values that correspond to the default behaviour of the package are marked by an asterisk.

²http://www.ctan.org/tex-archive/fonts/mnsymbol/

Key	Values
normalweight	Book*, Regular, auto
boldweight	Medium*, Bold, auto
scale	(factor)
largedelims	true, false*

4 Symbols

The fdsymbol package provides the following symbols.

4.1 Ordinary symbols

\lceil
                                      \label{lbrace} \
\rceil
\ulcorner
                                      \rbrace,\}
```

4.7 Faked symbols

The following symbols are taken from the text font or another math font (in case of \Re and \Im).

† \dagger \%	\Re
† \ddagger	\Im
¶ \mathparagraph ħ	\hbar
	•
\$ \mathdollar n	\hslash
£ \mathsterling ®	\circledR
¥ \yen §	\circledS

4.8 Missing symbols

The following symbols from Computer Modern or the AMS fonts are missing in FdSymbol. If available, they should be taken from the text font.

\mho	\varkappa	\lhook
\nabla	\Bbbk	\rhook
\eth	\backepsilon	\diagup
\digamma	\mapstochar	\diagdown

5 Implementation

```
1 (*style)
2 \RequirePackage{xkeyval}
```

We use xkeyval's key mechanism to declare all options. The first options determines the size of delimiters.

```
\verb|3\define@boolkey{fdsymbol.sty}[fdsy@]{largedelims}[true]{}|
```

The next option allows to scale the fonts by an arbitrary factor.

- ${\tt 4 \newcommand \{\fdsy@scale\}\{1.0\}}$
- 5\define@key{fdsymbol.sty}{scale}{\renewcommand\fdsy@scale{#1}}

The following two options control which weights are used for which math version and font size.

- 6 \newcommand\fdsy@mweight{Book}
- 7 \newcommand\fdsy@msweight{Book}
- 8 \newcommand\fdsy@bweight{Medium}
- 9 \newcommand\fdsy@bsweight{Medium}
- 10 \define@choicekey*{fdsymbol.sty}{normalweight}[\@tempa\@tempb]{book,regular,auto}{%
- 11 \ifcase\@tempb\relax
- 12 \renewcommand\fdsy@mweight{Book}

```
\renewcommand\fdsy@msweight{Book}
13
14
    \or
      \renewcommand\fdsy@mweight{Regular}
15
      \renewcommand\fdsy@msweight{Regular}
16
17
      \renewcommand\fdsy@mweight{Book}
18
      \renewcommand\fdsy@msweight{Regular}
19
20
    \fi
21 }
22 \define@choicekey*{fdsymbol.sty}{boldweight}[\@tempa\@tempb]{medium,bold,auto}{%
    \ifcase\@tempb\relax
23
      \renewcommand\fdsy@bweight{Medium}
24
      \renewcommand\fdsy@bsweight{Medium}
25
26
27
      \renewcommand\fdsy@bweight{Bold}
      \renewcommand\fdsy@bsweight{Bold}
28
29
      \renewcommand\fdsy@bweight{Medium}
30
      \renewcommand\fdsy@bsweight{Bold}
31
32
    \fi
33 }
35 \ExecuteOptionsX{largedelims=false}
36 \ProcessOptionsX
Load external packages, but only if they are not already loaded in order to avoid
warning messages about loading a package twice with different options.
37 \@ifpackageloaded{amsmath}{}{\RequirePackage{amsmath}}
38 \@ifpackageloaded{textcomp}{}{\RequirePackage{textcomp}}
39 \@ifundefined{mathfrak}{\RequirePackage{eufrak}}{}
If the option largedelims has been selected, we readjust the scaling factors of big
delimiters, so that \Big, \bigg and \Bigg do not change their size.
40 \iffdsy@largedelims
    \renewcommand{\Big}{\bBigg@{1.25}}
    \renewcommand{\bigg}{\bBigg@{1.66}}
    \renewcommand{\Bigg}{\bBigg@{2.08}}
Some symbols missing from FdSymbol can be obtained from other fonts or by
combining several other symbols.

   There is no \not symbol in FdSymbol since all relational symbols come with a
  stroked companion. For compatibility we define a \not command that places a
  virgule over the following symbol.
\label{localign} $$1721 \end{cencel} $$1721 
1722 \def\not#1{\mathrel{\m@th\mathpalette\c@ncel{#1}}}
